

#### APPLICATION:

Vibration absorbers reduce the transmission of noise and vibration from mechanical equipment onto a building structure. They are used to support, isolate and suspend mechanical equipment, and to protect equipment from damage during seismic activities.

#### PRODUCT FEATURES:

WS-1 vibration absorber is made from quality materials to deliver outstanding results. With its energy absorption module, WS-1 provides amazing performance over other shock absorbers. It comes with a high polymer vibration damping adhesive that makes installation a breeze and ensures that it stays put when reducing sound and noise vibrations.

#### BENEFITS:

- low cost for high performance,
- isolate suspended sources of both noise and vibration,
- decouple double walls and base structure, increase stiffness

#### SIZE:

100mm (L) x 50mm (W) x 50mm (H)
